# Introduction To The HAER Checklist: 1969-1985

This checklist is a listing of documentation produced by the Historic American Engineering Record (HAER) from its inception in 1969 through May 1985. By documentation, we mean measured drawings, photographs and written data, all produced in a standard format, to facilitate use by and reproduction (at moderate cost) for the public. The documentation is produced on archivally stable mediums to prolong shelflife. There are 1,200 HAER sites documented by 1,400 sheets of drawings, 17,000 photographs and 11,600 data pages — most of which are in the HAER collection at the Library of Congress. The HAER collection is one of the most comprehensive graphic and written archives of a country's technological heritage of any nation in the world. Scanning the list of sites documented over the past 16 years reveals the diversity of the collection. Sites range from early stone-based blast furnaces, water powered grist mills, ice houses, snuff mills, tide and wind mills to early 20th century iron and steel plants. Bridges of every type and description from wooden covered, stone arches and iron truss spans to suspension bridges, steel cantilevers, and multiple concrete arches have been photographed, delineated and researched. Popular subjects include just about every type of railroad structure constructed, as well as the textile mills of New England. Even recent technologies such as the mobile rocket launchers at Kennedy Space Center are included.

The checklist also identifies areas of the United States for which documentation is not included in the HAER collection. To date, sites in the States of Nebraska, New Mexico, Oklahoma and South Dakota and the territories of American Samoa, Guam, and the Trust Territories are not in the collection. It indicates subjects in the history of

technology and industrial archeology for which little or no HAER documentation has been compiled. For example, documentation of coal mining operations, the chemical industries, sanitation systems, machine tool and die industries, communications (telephone, telegraph, radio and TV), materials handling, power and energy transmission, and specific aspects of building technology is scant or non-existent.

## Where Documentation Comes From

The documentation is produced by the Historic American Engineering Record, a program of the National Park Service, U.S. Department of the Interior. HAER was established in 1969 by the signing of a tripartite agreement between the National Park Service, the Library of Congress and the American Society of Civil Engineers. The National Park Service administers the program, while the Library of Congress is the repository for the drawings, photographs and written data and services requests from the public for reproductions. The American Society of Civil Engineers (ASCE) supports recording projects and provides professional counseling to the HAER program through its national membership.

Staffed by architects, engineers, historians and photographers, HAER conducts a nationwide documentation program in cooperation with State and local governments, historical organizations, professional societies, universities and preservation groups. Documentation projects focus on individual sites or systems, usually organized by geographic and political area or by industrial type. The primary criterion in selecting sites for documentation is whether the

site can reveal information critical to understanding and interpreting the history of engineering, industry and technology.

Most of the documentation listed was produced by field teams staffed by professional and student architects, engineers, historians and photographers during the summer months. Architects measure the structure noting their measurements and other information in field notebooks and then prepare carefully inked drawings on archivally stable mylar drawing sheets. Historians and engineers

prepare historical reports on each site using primary and secondary sources, but focus on the physical remains of the structure itself. Large format ( $4 \times 5$  or  $5 \times 7$  inch), black and white photographs supplement the drawings and written data, as do photocopies of historical maps, illustrations and old photographs. HAER documents complex industrial processes and interprets them by flow diagrams and axonometric drawings and in some instances, documentary films. In addition to the documentation produced by summer recording teams, an increasingly significant amount of documentation is being added to the collection from donated drawing projects and mitigatory documentation. Mitigatory documentation is produced for historic industrial or engineering sites, listed in or eligible for listing in the National Register of Historic Places, where such sites are threatened with alteration or demolition by a project funded or licensed by a Federal agency.

## How To Read The Checklist

Sites recorded are listed alphabetically by State code and numerically by county code. The entry includes the site name, location, HAER number and the number of drawings, photographs and pages of data compiled for each site. Each entry also indicates whether the material is at the Library of Congress (LC) or temporarily in the HAER Washington office (HH) awaiting transmittal. The control code facilitates accessing the computer index at terminals in the Library of Congress and the HAER Washington office. The county code indicates the county in which the site is located. An index of county codes can be found at the end of the Checklist.

## How To Access The Collection

At this writing, the HAER collection can be used in two ways

- by visiting the Library of Congress in Washington or by ordering documentation over the telephone or by mail. To facilitate ordering reproductions from the HAER collection, all documentation has been produced in a standard format. Drawings are produced on  $24 \times 36$  inch mylar drawing sheets; photographs are made on  $4 \times 5$  or  $5 \times 7$  inch negative sheet film; written reports are typed on  $8 \times 11\frac{1}{2}$  inch pages. Reproductions of drawings can be ordered as full-size xerox on vellum or they can be reduced to  $8 \times 10$  inch photographic prints or xeroxes. Photographs can be printed as  $4 \times 5$  or  $5 \times 7$  contact prints or enlarged to  $8 \times 10$  black and white glossy or exhibition quality prints.

## How HAER Documentation Can Be Used

HAER documentation is used by historians and scholars researching aspects of our technological, engineering and industrial heritage. Architects and engineers working on the rehabilitation, restoration or adaptive reuse of sites recorded by HAER often find the documentation invaluable. Editors and publishers of books, magazines and periodicals have discovered that the HAER collection often is the only

source for drawings and photographs, particularly when a structure or site has been destroyed. Even railroad enthusiasts have used the drawings of train stations for constructing stations in model railroad layouts.

Documentation in the HAER collection is in the public domain and may be used without restriction other than the courtesy of a credit line identifying the program and the individual who produced the documentation.

## Credits

Data pages can be aeroxed. These are in most common forms of reproductions requested, however, other formats and sizes are available. Copies of HAER documentation at the Library are made by the Library's Photoduplication Service. The Library's Prints & Photographs Division (whose address and telephone are noted at the end of this Introduction) can provide a schedule of reproduction formats and costs. Prints & Photographs staff can assist you in ordering reproductions from the collection and can provide you with estimates of reproduction costs once a selection has been made. Allow four to six weeks for orders to be processed.

HAER standards to the HAER collection. Contact the HAER Washington office for information on how you can participate in this program.

## How The Public Can Participate In The HAER Program

An increasingly important source of documentation to the HAER collection is donated drawing projects. Because of limited funding and staff available to finance and administer recording projects, HAER encourages colleges and universities, practicing architects and engineers, historical societies and interested individuals to donate documentation meeting HAER standards to the HAER collection. Contact the HAER Washington office for information on how you can participate in this program.

The cover design and introduction to the HAER Checklist were done by Eric DeLony, HAER Principal Architect. Charles E. Beyl prepared camera ready graphics for the cover.

The introductory essay was reviewed by Robert J. Kapsch, Chief, HABS/HAER; Mary Ison, Reference Specialist, Prints & Photographs Division, Library of Congress and Ellen Boone, Collections Management Specialist, HABS/HAER. Alice Keyes, Collections Technician, HABS/HAER, prepared the computer printout. Judy Bullock, HAER Secretary, typed the manuscript for this publication.

You are encouraged to use the HAER collection. The drawings, photographs and written data are maintained by the Prints and Photographs Division at the Library of Congress; Contact Ms. Mary Ison, Reference Specialist at the:
